

5 Big Predictions For Post Corona Life

A report by consultant Chaeyun Kim

1. Metaverse Trend In Gaming

Gaming As A Second Life

I presume that the development of meta verse will significantly impact many aspects of life, but especially in the gaming scene. Gaming will be not only considered as for time-killing but considered more seriously as a second life in another world. Therefore games will be more serious and realistic in graphics by game engines such as Unreal.

In the course of time people playing serious games will miss the games for time-killing. Therefore, a game within a game will appear, a non-serious cute games to relax even in the virtual world.

Live streaming will enter a new phase, as shown in the Travis Scott live concert in the Fortnite game. The live-streaming trend will develop into the first-person view so that you can watch your streamer as if they were just right in front of you. And there will be more personal interactions available such as talking directly to the streamer in the virtual world. There will also be more learning opportunities through games and virtual field trips, not to mention more sophisticated scams and cyber attacks.

1. Metaverse Trend In Gaming

*"In The Course Of Time People Playing Serious Games Will Miss The Games For Time-Killing.
Therefore, A Game Within A Game Will Appear, A Non-Serious Cute Games To Relax Even In The Virtual World."*

“Live Streaming Will Enter A New Phase As Shown In The Travis Scott Live In The Fortnite Game. The Live-Streaming Trend Will Develop Into The First Person View So That You Can Watch Your Streamer As If They Were Just Right In Front Of You. And There Will Be More Personal Interactions Available Such As Talking Directly To The Streamer In The Virtual World.”

2. More Weird Desserts

Virtual Food Into The Real Kitchen

I predict that as there are infinite possibilities in imagining how the cuisine will look and taste like in virtual reality, there will be more demand to taste virtual food in real life.

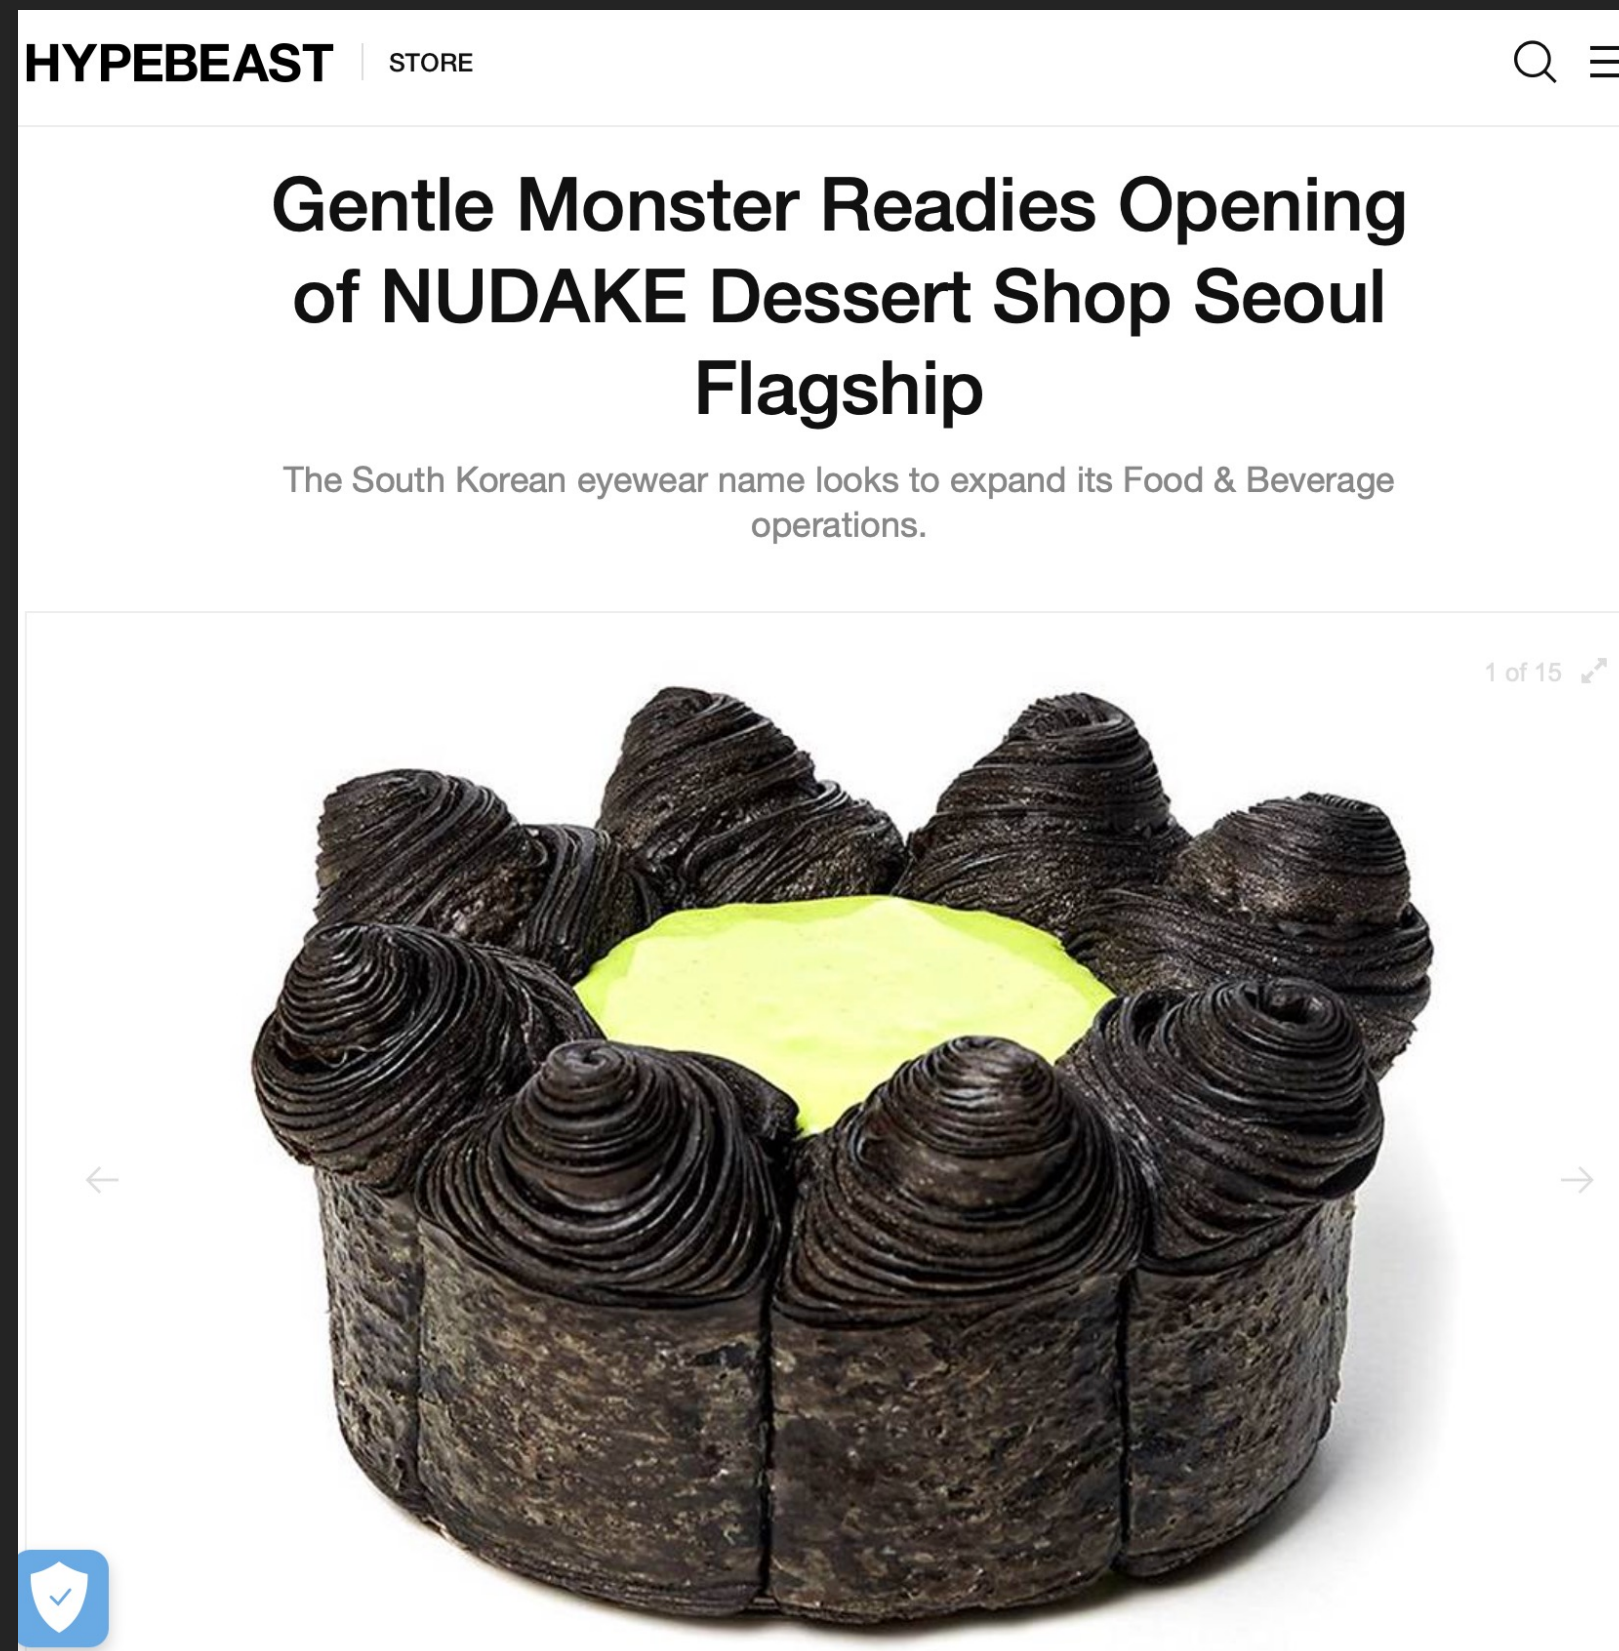

Dessert is especially one of the unique food that it can be crafted purely by human hand into any possible form.

They are also consumed in many muk-bangs (Korean eating show, it is one of the popular contents on Youtube.)

as they give pleasure to the tongue and eyes. Content creators are looking for more eye-catching and extreme, and beautiful food.

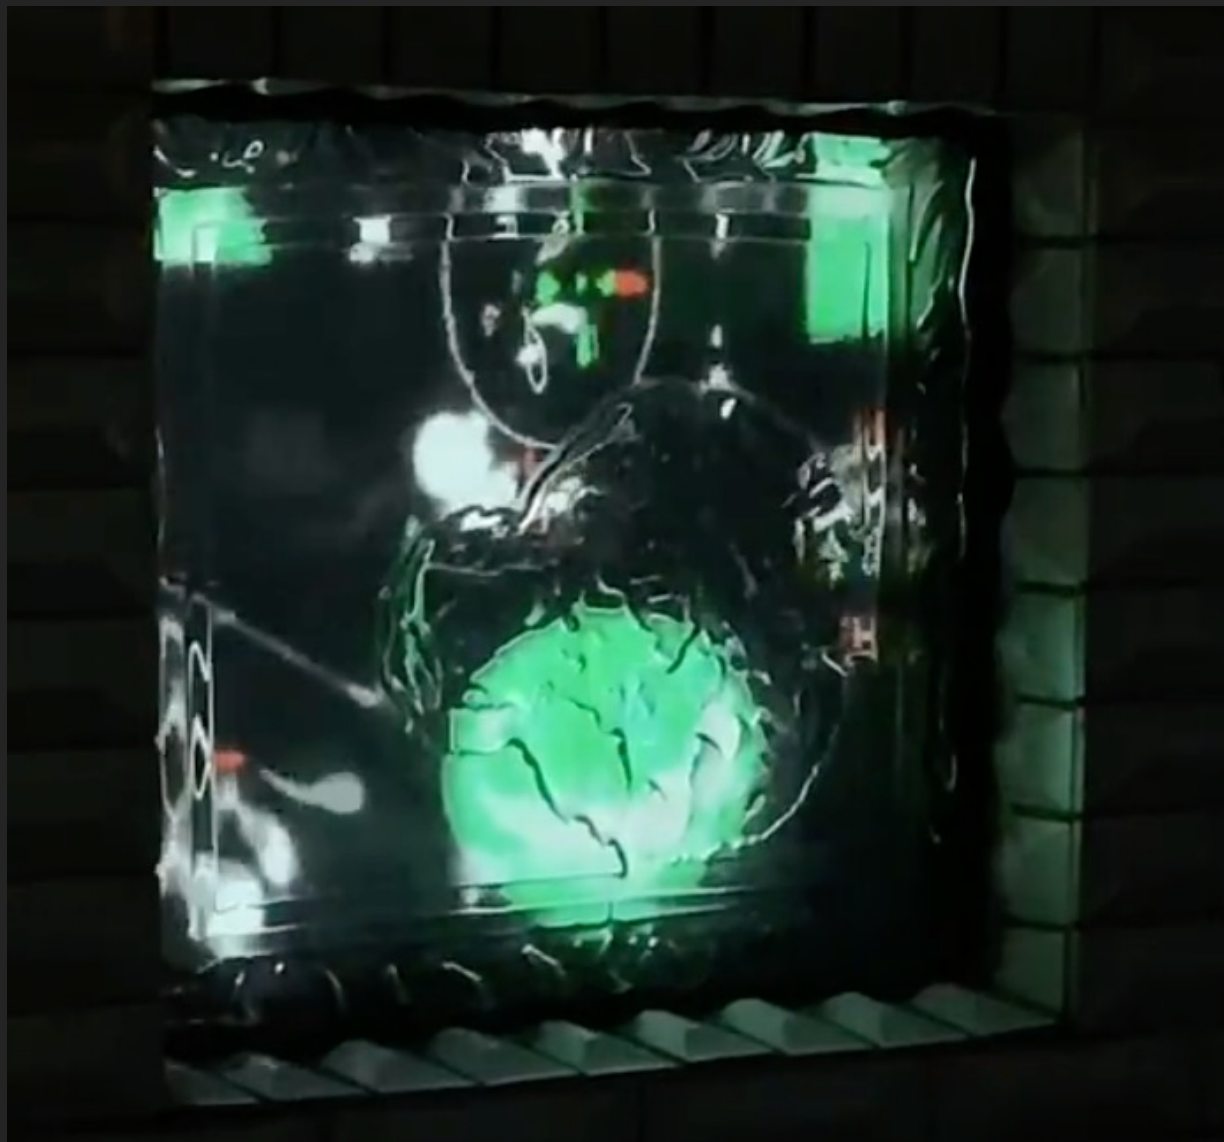

People will crave materiality in real life that they cannot enjoy yet in a virtual world.

I Predict That There Will Be More Demand To Actually Taste The Virtual Food In Real Life.

4. AI Assistants come back as Robotic Pets

Pokemon For All

Nowadays, many people have Alexa in their houses. Even when not, all people with smartphones have personal AI assistant, such as Siri, or Bixby and google. When people start to have a second life, they would also have a virtual pet or some character that is always with them. People would want to interact with them in real life as well. Then there would be no place anymore for Siri. They will be replaced with AI robotic pets that can exist in every device that uses the internet.

4. AI Assistants come back as Robotic Pets

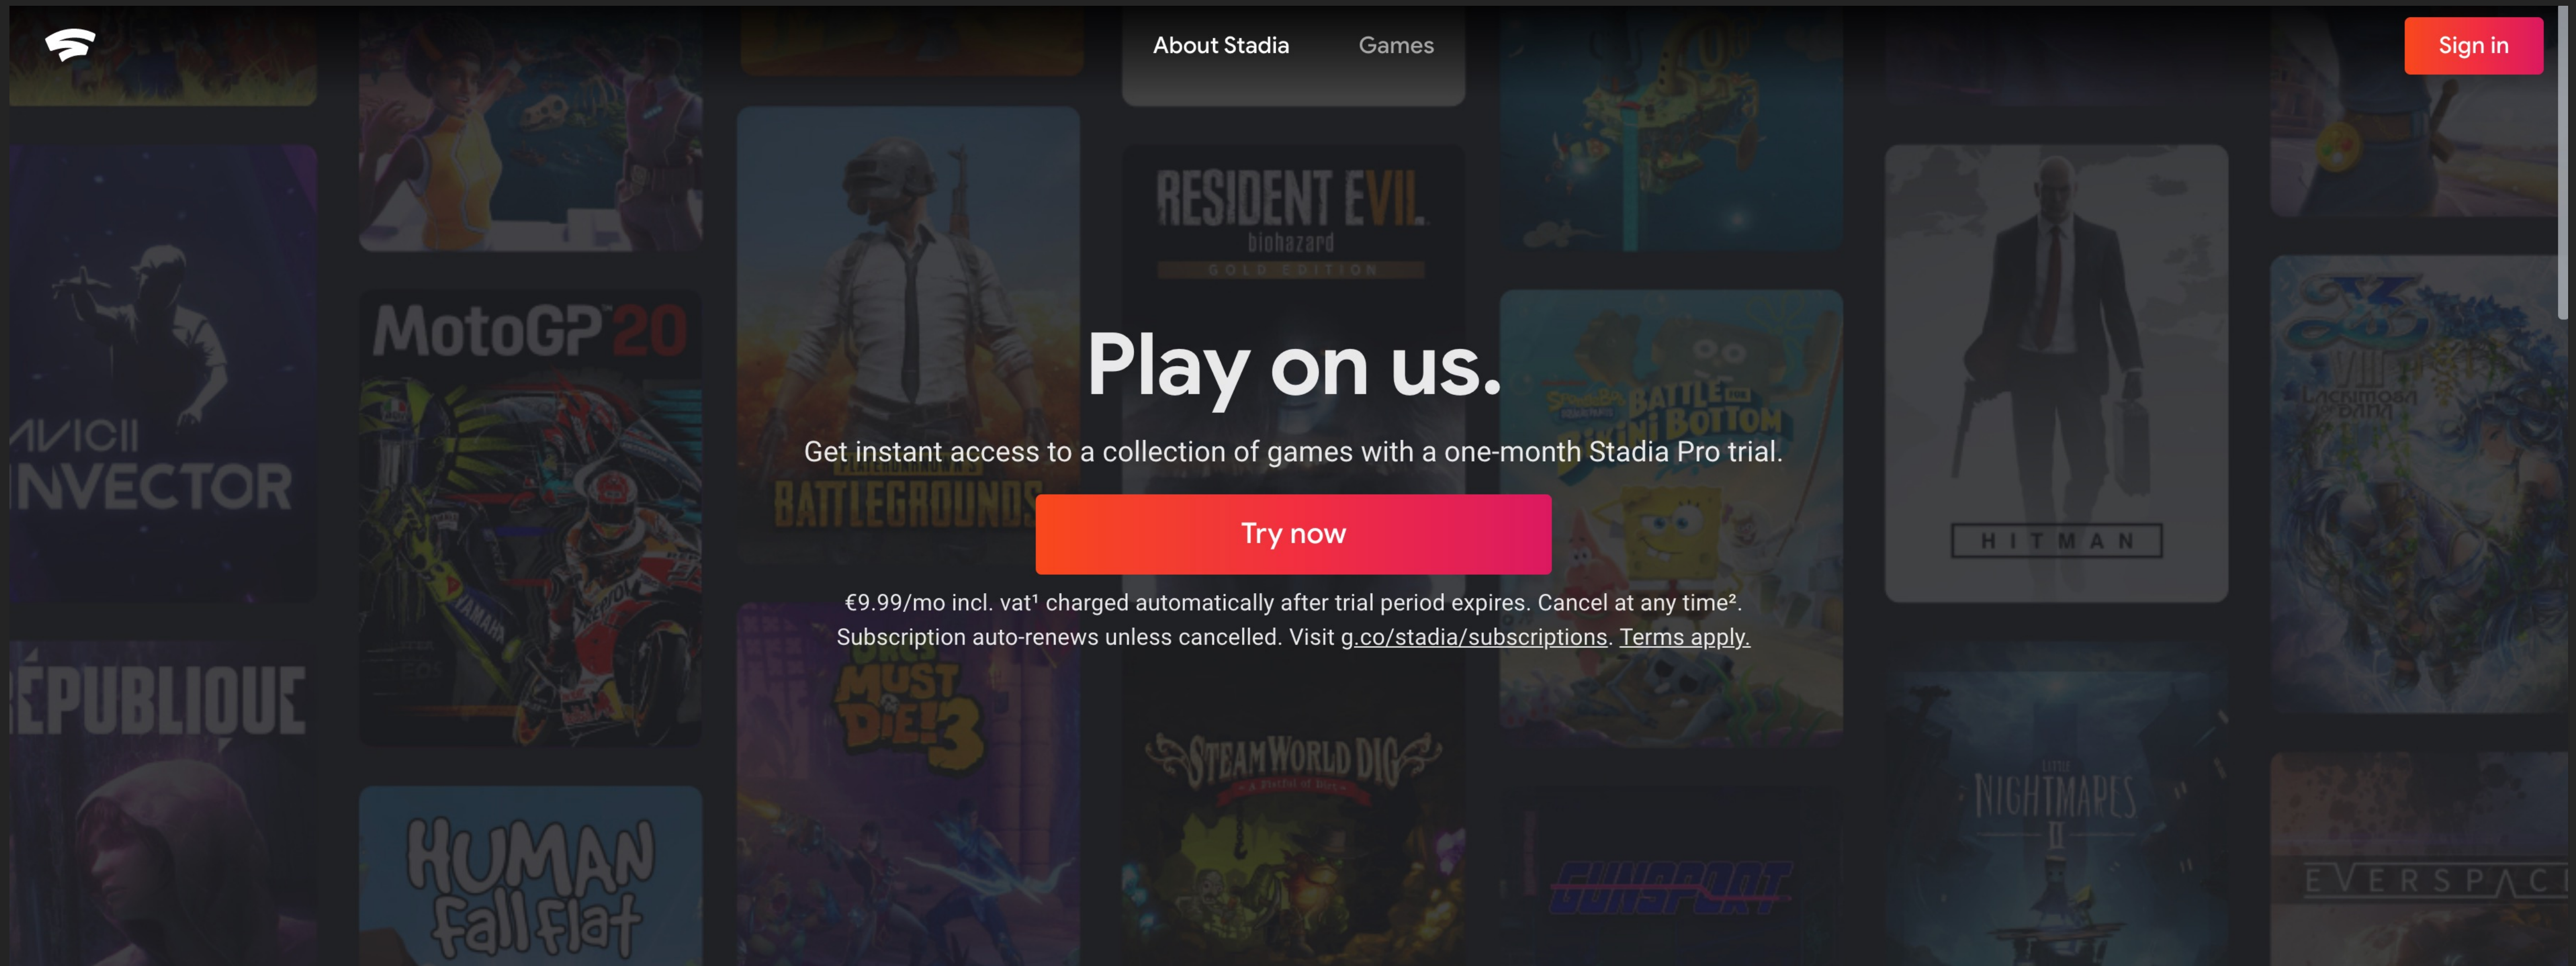

People Would Want To Interact With Them In Real Life As Well. Then There Would Be No Place Anymore For Siri.

5. Gaming Will Be Streamable.

Freedom From Devices, No More Downloads!

In order to make metaverse as an actual immersive alternative reality, you would need a good performing PC such as gaming laptops. Well, not anymore with modern technology! There is already a service called stadia from google. It now has about ten games available. People can stream the games on any electronic device such as phones and TVs. Later on, gaming will be possible without downloading on a browser. It costs about ten dollars a month. In the near future, most of the gaming will be available with an online streaming service.

5. Gaming Will Be Streamable.

Play on us.

Get instant access to a collection of games with a one-month Stadia Pro trial.
