

Booklet: Fiddler Crabs

Booklet by Victoria-Luise Scheible, Merz Akademie Stuttgart 2021/2022, in collaboration with the researcher Dr. Daniela M. Perez, at the Max-Planck-Institute Konstanz.

A booklet that is informative and easy to read about the species of Fiddler Crabs. It contains general information about the crabs and introduces Dr. Daniela M. Perez as a researcher. The texts of the booklet are structured in the form of an interview, which makes them quick and easy to read. The design is in black and white, so it looks very casual and stylish, the illustrations in ink and watercolor also contribute to this look. The format is square, which lent itself well to the shape of the crabs. The last part of the booklet is dedicated to the topic, 'How to lay out a booklet,' to give a little insight into our field.
